INTRODUCTION: WHAT IS GEOGRAPHY?

Around the world and even in your community, increased screening of passengers at airports and increased monitoring of those returning from affected areas have been implemented. This is a result of the current global health crisis. However, as the virus spreads beyond China, it is clear that the initial measures were not enough. The effectiveness of these measures is now being questioned. How will the world react?

Patterns and Trends

Once we know about a new disease, we must understand how it spreads and affects society. This is important for controlling the disease and preventing its spread. Understanding the patterns of disease transmission can help us develop effective strategies to prevent the spread of the disease.

Political

Environmental

Social

Economic

Geographers study a wide range of issues, from local to global, to better understand the world around us. By analyzing patterns and trends, we can make informed decisions that address the needs of society.
